

NICT Middle East

A Vision of IB Consultancy

6-8 November 2017 | **W Doha** Hotel, **Qatar**

Welcome to NCT Middle East

Join the leading international CBRNe event series for its **fourth edition** in the Middle East taking place on 6-8 November 2017 at the **W Hotel** in Doha, Qatar. IB Consultancy has partnered with the **Qatar National Committee for the Prohibition of Weapons (NCPW)** in organising the 4th edition of NCT Middle East! The NCPW is a permanent body entrusted with the implementation of international conventions on disarmament, including weapons of mass destruction, as well as the Biological and Chemical Weapons Conventions.

NCT Middle East 2017 will provide outstanding opportunities to meet leading international experts, regional decision-makers and first responders in the field of CBRNe defense and response. The conference and exhibition will provide you with high-level presentations on regional CBRNe challenges and threats, approaches and state of the art equipment from CBRNe detection to decontamination and recovery, as well as regional capability building and procurement projects. With traditionally high-level speakers from all over the region, **NCT Middle East 2017 is an event not to be missed.**

The CBRNe threat has been on the rise in the Middle East with the **continued use of chemical weapons** (including chlorine, sarin, mustard gas and phosgene) in the conflicts in **Syria** and **Iraq** for the past three years. The Organization for the Prohibition of Chemical Weapons (OPCW) and the Joint Investigative Mission (JIM) continue to look into each reported incident to identify the perpetrators and work towards eliminating the use of chemical weapons.

Collapsing health care systems due to the armed conflicts have increased the risk of outbreaks of infectious diseases. Refugee flows may transfer diseases to neighboring countries and other regions. These developments underline the need for adaptive response mechanisms, effective bio-surveillance systems, new vaccines and better treatment methods. The use of advanced weaponry and prohibited weapons (including phosphorus sulfur, cluster bombs) is contributing to an **increasing UXO problem** and new health care problems.

Building on the successful previous events in Abu Dhabi, Amman, and Kuwait City, NCT Middle East 2017 will discuss this enduring threat to regional and international security. If there is anything we can learn from the pattern of conflict we face, it is that **Middle Eastern states must be prepared to prevent, counter and mitigate non-conventional attacks** against their polities and people. High-level representatives, experts and decision-makers will therefore discuss how military, special forces and first responders can prepare for worst-case scenarios and will thereby provide attending delegations with in-depth knowledge in all fields of CBRNe defense from preventive measures to specific responses. The CBRNe Society, in close cooperation with IB Consultancy, will assemble **leading international experts** and **regional decision-makers** and first responders to discuss this imminent threat, best practices and effective approaches in CBRNe detection, civil defense and decontamination.
